Operating Results

Review of operations

A number of opportunities to rationalise the current tenement holding has been identified and will allow a focus on those areas considered more prospective for gold mineralisation in known areas of high prospectivity

The company recognises that potential cost cutting measures in order to preserve shareholders funds is important, while at the same time focussing on good gold assets within the company and maintaining an active review of any opportunities that may be in the market.

The Nex review has highlighted the key gold projects within the Nex tenement holdings to comprise the Kalgoorlie West, Tampa Well, Jungle Well and Euro Projects. A summary of the key aspects and previous results returned from these projects is provided within this quarterly.

Systematic mapping, rock chip sampling and analysis completed over Nex Metals Kookynie Gold tenements (E31/712, E40/210) with a large number of plus 1.0 g/t gold rock (Au) chip samples returned, highlighting a number of gold mineralised trends. Within the Tampa tenements located immediately to the east of the Orient Well open pit a total of ten samples greater than 1.0 g/t Au were returned with a maximum value of 14.63 g/t Au.

Sampling of the Jungle Well exploration license (E31/712) also returned a number of strongly anomalous gold values with a total of five samples returning gold values greater than 1.0 g/t Au with a maximum value of 3.11 g/t Au being returned. This sampling has defined a 400 metre long zone of gold workings near the contact of the eastern granitoid accompanied by elevated arsenic and lead values and is open to the north and south.

Mapping and sampling of Reef Dam (E25/320) was completed during the quarter. A total of 28 samples were collected and have been submitted for gold and base metals. Results are due in the next quarter.
